CHAPTER 16 EXERCISE 16.1
ILLINOIS STATE UNIVERSITY

Write a function called `print_time` that takes a `Time` object and prints it in the form `hour:minute:second`. Hint: the format sequence `'%.2d'` prints an integer using at least two digits, including a leading zero if necessary.

```
class Time:

    def __init__(self, hour=0, minute=0, second=0):

        self.hour = hour

        self.minute = minute

        self.second = second

def print_time(time):

    print('%.2d:%.2d:%.2d' % (time.hour, time.minute, time.second))

t = Time(9, 5, 3)

print_time(t)
```

```
class Time:
    def __init__(self, hour=0, minute=0, second=0):
        self.hour = hour
        self.minute = minute
        self.second = second

def print_time(time):
    print('%.2d:%.2d:%.2d' % (time.hour, time.minute, time.second))

t = Time(9, 5, 3)
print_time(t)
```
