

BIS 420 PROGRAMMING FOR DATA SCIENCE
PRAJAKTA POHARE
CHAPTER 10 EXERCISE 11.9
ILLINOIS STATE UNIVERSITY

If you did Exercise 10.8, you already have a function named `has_duplicates` that takes a list as a parameter and returns `True` if there is any object that appears more than once in the list. Use a dictionary to write a faster, simpler version of `has_duplicates`. Solution: http://thinkpython.com/code/has_duplicates.py.

```
/usr/local/bin/python3 "/Users/prajaktapohare/Library/CloudStorage/OneDrive-ILStateUniversity/BIS420/Week 11/BIS420_PrajaktaPohare_Ch11_11.9.py"
• → ~ /usr/local/bin/python3 "/Users/prajaktapohare/Library/CloudStorage/OneDrive-ILStateUniversity/BIS420/Week 11/BIS420_PrajaktaPohare_Ch11_11.9.py"
False
True
False
True
○ → ~
```
